For each problem below, you are given a piece of information that tells you a lot. Use what you know about that information to fill in the rest.

1. You get this:	Fill in this:
$y = x^2 - x - 12$ $.5^2 - .5 - 12 =$ <p>vertex x $(.5, -12.5)$</p> <div style="border: 1px solid red; padding: 2px; display: inline-block;"> $x = \frac{-b}{2a}$ </div> $\frac{1}{2(1)} = \frac{1}{2}$ $(x, -)$	<p>Factored form of the equation: ①</p> $(x+3)(x-4)$ <p>Graph of the equation: ②</p>

READY, SET, GO! Name _____ Period _____ Date _____

READY

A golf-pro practices his swing by driving golf balls off the edge of a cliff into a lake. The height of the ball above the lake (measured in meters) as a function of time (measured in seconds and represented by the variable t) from the instant of impact with the golf club is

$$58.8 + 19.6t - 4.9t^2$$

The expressions below are equivalent:

$-4.9t^2 + 19.6t + 58.8$	standard form
$-4.9(t - 6)(t + 2)$	factored form
$-4.9(t - 2)^2 + 78.4$	vertex form

- Which expression is the most useful for finding how many seconds it takes for the ball to hit the water? Why?
- Which expression is the most useful for finding the maximum height of the ball? Justify your answer.
- If you wanted to know the height of the ball at exactly 3.5 seconds, which expression would help the most to find the answer? Why?
- If you wanted to know the height of the cliff above the lake, which expression would you use? Why?

Topic: Factoring Quadratics

Verify each factorization by multiplying.

10. $x^2 + 12x - 64 = (x + 16)(x - 4)$

11. $x^2 - 64 = (x + 8)(x - 8)$

12. $x^2 + 20x + 64 = (x + 16)(x + 4)$

13. $x^2 - 16x + 64 = (x - 8)(x - 8)$

Factor the following quadratic expressions, if possible. (Some will not factor.)

14. $x^2 - 5x + 6$

15. $x^2 - 7x + 6$

16. $x^2 - 5x - 36$

17. $m^2 + 16m + 63$

18. $s^2 - 3s - 1$

19. $x^2 + 7x + 2$

20. $x^2 + 14x + 49$

21. $x^2 - 9$

22. $c^2 + 11c + 3$

23. Which quadratic expression above could represent the area of a square? Explain.

24. Would any of the expressions above NOT be the side-lengths for a rectangle? Explain.
